

PRESS RELEASE

**FIRST HAND DISINFECTANT COLUMN WITH HIGH
PERFORMANCE FOOT-OPERATED PUMP FOR HEAVY LOADS**

Hamburg, August 10th, 2020 – A world's premiere is set to conquer the hygiene market straight from Hamburg, Germany: CAPULUS Medical Services has presented the first hand disinfection column with a high-performance foot pump. With the new column, hundreds of thousands (millions of times) applications can be carried out without any problems and, above all, without the risk of contamination. Only the disinfectant needs to be refilled. Conventional disinfectant dispensers and columns usually work with sensitive (electronic) sensors or brackets that have to be pressed down. In everyday operation, very often touched with hands by the customers for example in supermarkets, which of course can lead to contamination. Recontamination is impossible with the new column thanks to a new type of technology.

With the CAP MED X3500 hand disinfection column, a product is launched that can be used both indoors and outdoors thanks to its robust, weather-resistant processing. The powder-coated, fully galvanized hand disinfection column with stand, as well as a lockable 5 liter tank for hand disinfectant does not require a power supply and makes handling pleasant and efficient thanks to its high-performance industrial foot pump.

The handcrafted disinfectant column is manufactured using the laser cutting process according to the highest quality classification and is provided with the European safety certificate. With a height of a little over a meter (1,004 mm), a weight of approx. 11.5 KG and a stand (30 x 30 cm), the CAP MED X3500 hand disinfection column is ideal for hand disinfection in the outdoor and entrance area of sports facilities, stadiums, Food retail, trade fair and event locations, public facilities such as schools, offices, libraries, as well as hospitals and care facilities. In addition, the column is ideal for use on cruise ships as a permanent installation, as the base can be anchored in the floor using four prefabricated holes with screws. For kindergartens and primary schools there is a smaller, child-friendly version with a 3 liter capacity.

It is important to note that only hand disinfectants may be used for the CAP MED X3500 and that it is not suitable for gel hand disinfectants and surface disinfectants. Our in-house hand disinfectant BIOANTISEPTICA VIRUCIDAL PLUS according to the WHO recipe with high-purity bio-ethanol and a 99.9% bacterial and virus filter efficiency is ideal for the use.

The Hamburg based company CAPULUS Medical Services specializes in holistic hygiene concepts for companies, in the import and export as well as the own production of CE / FDA certified medical accessories according to DIN 14683:2019 + AC:2019 such as face masks, hand and surface disinfectants with 80% organic ethanol, euro dispenser, sterile PP / SMS surgical gowns and protective suits as well as infrared clinical thermometers.

Customers include companies such as the Bremen Clinic Association, Elmos Semiconductor, the Eichsfeldkliniken, Evac Train or the world market leader Gelita AG.
